

Cable CPR Ratings

**Are you aware of the importance of
cable CPR* Ratings?**

Every cable sold should have a label like this:

- ▶ The label declares the CPR rating of the cable – in this case *CPR Cca*;
- ▶ The only exception is Fire Cable, but these may also be included within the next few years;
- ▶ There are five levels of CPR ratings, *Fca* being the lowest, *B2ca* the highest;
- ▶ Since Grenfell, the move is towards all cables in public buildings being a minimum rating of *CPR Cca*;
- ▶ If the wrong cable is installed, the implications are likely to be massive. Inspectors could demand the cable be ripped out and re-installed if it is not to the correct standard.

Level	CPR Rating	HIGH
5	CPR B2ca, , sX, dX, aX	
4	CPR Cca, , sX, dX, aX	
3	CPR Dca, sX, dX, aX	
2	CPR Eca	
1	CPR Fca	LOW

Please make sure that you are on the lookout for CPR ratings when they are specified, and that this information is passed on to your cable supplier at the enquiry or order stage.
